

What's new in InfoWorks WS Pro

This topic lists the additions and improvements incorporated in InfoWorks WS Pro Version 2021.5 which were not available in previous versions.

Please note that this new version also includes various enhancements and bug fixes that are not described in detail here.

Title Bar in the Main Window now displays the environment and tenant

When you are [logged into Info360.com](#), the title bar displays the environment and tenant as follows, [Environment:Tenant].

Start Time in the Test Feed dialog is set to seven days prior to current date

By default, the **End Time** in the [Test Feed dialog](#) is set to the current time, while the **Start Time** is now set to one week prior.

Demand Management Area (DMA) Summary report

[Demand Management Area \(DMA\) Summary report](#) is a new kind of service level report, available from the Results – Grid Report menu. This report is designed to comply with reporting requirements in the UK but is of wide applicability. The report scans customer service levels, using thresholds for pressure and duration, and it allows episodes of outage to be joined if the gap between them is short.

The report aggregates customers into groups, according to the extent of outage that they experience. Costs can be assigned to affected customers.

Import and Export SQL Queries

You can now import and export SQL Queries into the application using [Importing SQL Queries from Event files](#) and [Exporting SQL Queries to Event files](#).
